ZHIM COOLING

Commercial frozen-dessert equipment, built in Guangzhou.

Who We Are

More than ten years ago, we started building commercial frozen-dessert equipment in Guangzhou.

It began with one person, a hand-drawn sketch and three second-hand tools: a cutter, a welder and an angle grinder. The first countertop machine took three months to build. The first winter nearly finished us: four months with almost no orders. That winter also set our course. When China is in winter, somewhere on earth it is summer.

For most of those years our machines reached overseas markets through trading companies. Today we export directly, so you deal with the factory that builds your machine.

One thing has not changed. The machine is a tool our customer earns a living with. Every day it stands still costs him a day's takings. Everything we do follows from that.

-- Wang Yanyan, Founder

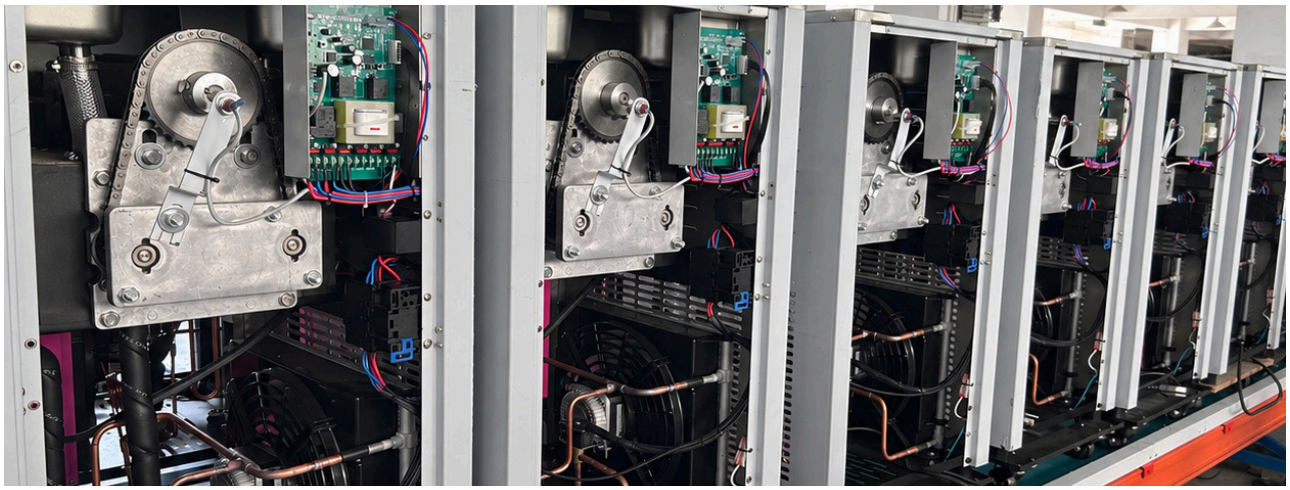

3	4,500-5,000	45,000-60,000
PRODUCTION LINES	UNITS / MONTH	UNITS / YEAR

Approximate production capacity; output varies with product mix and scheduling.

Manufacturing

Three production lines. Built for B2B supply. Mechanical assembly, refrigeration, electrical work and final preparation happen on one line, under one roof.

Configured for your market

We agree the model, voltage, frequency, plug and selected options with you before production, so the machine configuration matches its intended destination.

Assembly across the complete machine

Mechanical components, refrigeration assemblies, wiring and controls are fitted and checked by production stage.

Visibility from production to dispatch

Production photos, finished-machine checks and packing details are available on request, so your team can plan the next step.

Quality Control

From the first component to the packed machine. Every machine is powered up, filled and run through a dispensing check before it is allowed into a crate -- every unit, not a sample.

01 Incoming components -- Key materials and components are checked before assembly.

02 Assembly and connections -- Assembly condition, connections and configuration are checked during the build.

03 Electrical configuration -- The electrical build is checked against the specified voltage and frequency.

04 Machine functions -- Controls, refrigeration and dispensing functions are checked before final preparation.

05 Finished equipment -- Model, appearance, accessories and selected configuration are checked together.

06 Packing and identification -- Protection, package identification and shipment documents are checked before dispatch.

Product Portfolio

One portfolio. Multiple frozen-dessert opportunities.

Soft serve

Countertop and floor-standing formats for cones and cups in dessert shops, cafes and foodservice locations.

Automatic ice cream mixing

Equipment for preparing mixed ice-cream desserts and expanding the menu at the point of sale.

Commercial popsicle

Ice-lolly production equipment for businesses offering frozen treats in a moulded format.

Commercial slushy

Single-, double- and triple-tank formats for serving frozen drinks and offering a choice of flavours.

Branding & Delivery

A practical route from selection to shipment. We coordinate machine configuration, artwork, production communication and export packing. If you would like to evaluate a sample before a volume order, talk to us about the model and sample-order terms.

Private-label presentation

For agreed OEM orders, we coordinate your logo, machine graphics, panel and packaging artwork. A placement photo lets you confirm the logo on the actual machine before application. Customisation scope is agreed for your model.

Destination-ready planning

Voltage, frequency, plug and delivery destination are agreed together. We can coordinate with your forwarder in China or quote a delivery route using your full address.

Clear production and shipping details

Machine photos, packing arrangements, shipping marks and the required commercial documents are coordinated for your order. Lead time and freight are agreed before you proceed.

Compliance & Support

Product compliance

CE | UKCA | RoHS. Compliance documents are available for the applicable models and configurations — we will tell you which ones your market needs.

ISO 9001 quality management

Our company holds ISO 9001 quality-management certification.

ETL certification in progress

ETL certification is in progress. Certified models and scope will be shared following issuance.

English guidance and technical support

Operating guidance, troubleshooting and parts identification are available through your ZHIM contact. For a problem report, start with a nameplate photo, a short description and a video only if it is safe to film.

14-month limited warranty

The machine warranty runs from the actual vessel departure date from the Chinese port and covers verified defective durable parts. Approved replacement parts carry a 6-month warranty from their replacement date. Wear parts, misuse and overseas on-site labour or travel are excluded; the agreed service terms apply.

Tell us your market, application and initial quantity.
